SCALA PLAYER

Scala Player is the playback engine that allows you to play content scheduled in Content Manager. Scala offers both a Windows and Linux playback engine.

Features include:

- Stable and reliable digital signage playback 24 hours a day, 7 days a week
- Superior playback technology delivers smooth sub-pixel motion without distracting, choppy stutters
- Player will only download changes, not the entire content
- Communicates with Content Manager to track Player health and log events for ad billing or other reporting
- Seamless interface between Player and other systems/data using Python
- Supports Windows Streaming Video or live video inputs with corresponding hardware
- Plays either self-running media or interactive content with a touchscreen
- Optional audio-only Players available for managing both visual and audio messaging
- If your network connection goes down, Player keeps playing using store and forward technology
- Feature-based licensing options are available for a wide variety of hardware, from the very basic to the most advanced
